

The modular system of our controllers of the DE-CON family forms the appropriate basis for the development of customer-specific control systems. From your special requirements, we design your own myDE-CON!

myDE-CON

Customized control solutions

Individual development

With our many years of experience in customer-specific product and hardware development, we realize robust control systems for industrial automation technology. From conception to circuit development and prototype production to series production, we provide you with the complete development cycle from a single source. Of course, we also develop the firmware and software required for operation.

Your advantages:

- 35 years of knowledge and experience in custom development
- High quality standard
- Perfectly customized to your needs
- High economic efficiency of your product through optimal exploitation of the performance of the individual hardware components
